Read the text carefully and do the activities.

The migrations of the Saxon and Angle tribes, known as the Germanic people, were most important to the story of the development of the English language. For several centuries, beginning with the third century AD, these large tribal groups migrated out from central and northern Europe into other European parts and the Mediterranean world.

People of the Saxon tribe wandered from the central European homeland in numerous waves, including a series of migrations across the English Channel to the British Isles. These resettlements took place around the fourth and fifth centuries and coincided with migrations of Angle people to the same region.

When the Saxons and Angles arrived, they encountered Celtic people who had inhabited the islands for many centuries. Eventually, the culture of the Saxons and the Angles replaced the Celtic languages in the south-eastern regions, and thus emerged a new language, Anglo-Saxon, also known as Old English. This language and culture dominated all aspects of life in the region and evolved as its own culture, independent of the Germanic cultures in Europe, although considerable contact continued. Over the next thousand years, many great influences and changes came to the Anglo-Saxon language and culture, particularly by Danish Vikings and then by Normans, invaders from the continent, in 1066.

By the fourteenth century, English had become a language that was truly a mixture of different Indo-European languages: Celtic, Angle, Saxon, Danish, and Norman French. Because English was a melting pot of many different languages, it still has one of the largest vocabularies of any language in the world.
